Ruth,

Thanks for your international role in the field of food Nutrition. I enjoy receiving and reading your Journal. The current one is particularly useful as it clearly is a one stop shop on bio- fortification history, developments, prospects and value addition.

Keep up the good work.

James.

Dear Prof. Ruth Oniang'o,

Thank you so much for sharing this special issue on biofortification which is very important at this stage.

Thanks and Regards,

Srini

Good morning Prof Ruth. I am student pursuing Bsc Food Science and Technology in UoN.

Thank you Prof. Ruth for the email. I really admire your work and you inspire me to aim higher than ever.

Regard

Hannah Ng'ang'a

AFOSTECH UON SECRETARY GENERAL

Congratulations, it is finally done. I had the honor to review some of the publications.

All the best going forward,

Mohamed F. Sessay, PhD

Subject: Fwd: Announcing AJFAND Volume 17 No. 2 (2017) - Special Issue on Biofortification - GHI MATTERS

Date: Tue, April 25, 2017 1:02 am

Cc: "Ruth Oniang'o" <rkoniango@ruraloutreachafrica.org>

Dear Julie,

Would you mind to make a folder for the next issue of GHI Matters? In the coming days I intend to send you information for that issue in separate emails. This, however, is already one of them.

As you know, Hon. Prof. Ruth Oniang'o is the lead GHI Ambassador in Kenya. Below she is writing about a very important development that is worth mentioning, because of interest for the GHI community. After all, GHI is also about food (nutrient) security.

The initiator of the special issue, Dr. Howarth <>Bouis, is the 2016 winner of the World Food Prize. Therefore, it would be great if you could abstract a few sentences from Ruth's introduction and announce the special issue (with the link:

<http://www.ajfand.net/Volume17/No2/index.html>) in GHI Matters.

With kind regards,

Huub.

Ruth

Thank you for your very interesting introduction - I quite liked Per's approach to persuasion - and for the most interesting special issue on bio fortification. I hope all is well with you.

Best wishes

Tom.

Dear Professor Oniang'o,

1. Thanks for sending the latest e-newsletter focusing on Bio fortification in Africa. I do welcome such an initiative because this will assist millions of farmers, their families but also many African communities in urban and rural areas. I recently attended a presentation by researchers at CIAT (Jan Law and al), and representatives of Harvest Plus at the House of Commons organised by the All Party Parliamentary Group on Agriculture and Food for Development, chaired by Lord Ewan Dollington.

2. I want to start a campaign AGAINST DROUGHTS. For me, droughts are not natural events. Lack of or shortage of rainfall is. The technology is available to prevent droughts like early warning systems and of course irrigation. East Africa is blessed with abundant perennial rivers, groundwater, reservoirs. It's a matter of manpower and willingness to solve this recurrent situation, which is disseminating whole communities especially the pastoralists and their communities in East and West Africa. Please advise the steps to take to start the campaign. Best regards from London (UK). Antoinette

Hi Ruth,

Congrats on getting this important Special Issue out – and thanks to Howdy and his many colleagues for putting the effort into preparing all these papers.

Trust you are doing well. We miss you on ACIAR's PAC (and I hadn't focused before on the fact that the PAC of H+ is the same acronym!)

Big hug,

Kym

Hi Ruth. Trust you are well and look forward to seeing you at our next CABI Board meeting. Many thanks for sharing this fine article with me. Biofortification is indeed an important topic and I believe an essential part of the solution in combatting micronutrient malnutrition. I really appreciate your interest and strong support for this. Regards. Paulus

Dear Prof,
Thanks for the AJFAND Issue on biofortication. The journal presents good papers on biofortification which is an important intervention in human and animal nutrition. Thanks you. Prof.

Hi Prof.

Thanks for sharing this great issue on bio-fortification. It will be a great learning/reference material for SAA as we try to explore the possibility of venturing into bio-fortified crop production technologies.

Cheers

Dr. Kebba Ngumbo Sima

To: "rkoniango@ruraloutreachafrica.org" <rkoniango@ruraloutreachafrica.org>

Dear Prof, Thank you very much for this special issue, I am amazed at how much work and research efforts have been put into biofortification. I believe this is a very sustainable method for enhancing micronutrient uptake at every rural household.

Thanks again

Emily

Dear Prof. Oniang'o,

Congratulations on the publication of this special issue on biofortification. Would it be acceptable to you if I used some of the background information of your email to announced the special edition – via a short news post – on our Sweetpotato Knowledge Portal? It would help to inform the wider sweetpotato community of practice, and through our monthly e-newsletter, the information could reach other people working on roots and tubers as well.

Kind regards

Christine
